**A two component high performance polyamide epoxy primer.**

For industrial and commercial use as a protective maintenance primer for industrial plants, pulp and paper mills, textile mills, chemical processing plants, waste water plants, refineries, food processing plants, commercial buildings and marine structures. For coating and protecting storage tanks, piping, roofs and roof decks, water towers, structural steel, machinery, plant equipment, marine vessels, offshore structures and other surfaces exposed to humidity, chemicals and corrosive environments.

MoPoxY™ Epoxy Primer 513-10 in conjunction with the MoPoxY™ Epoxy Coatings 513-series offers excellent protection in exposures including moderate to severe industrial and marine environments. Excellent resistance to fresh and salt water, detergents and most chemicals. Very good resistance to fumes and spillage of most organic solvents, acids and alkalies. Excellent abrasion and moisture resistance. Convenient 1:1 mixing ratio. Heat resistant to 200°F.

Red

Semi-gloss

- Nonvolatile -** By weight - 53.0 ± 1.0%  
By volume - 40.1 ± 1.0%
- VOC (Calculated) -** 4.24 lbs./gal.  
508 grams/liter
- Flash Point -** (A) 70°F; (B) 53°F (Setaflash)
- Mixing ratio -** 1:1 by volume
- Weight per gallon -** A) 11.8 ± 0.2 lbs.; B) 7.5 ± 0.2 lbs.

- Recommended Film Thickness per Coat -** 2.0 mils dry, 5.0 mils wet
- Theoretical Coverage @ 2.0 mils dry -** 322 sq. ft./gal.
- Method -** Brush, roller, conventional and airless spray
- Thinner -** MoPoxY™ Brushing Thinner 75-35; MoPoxY™ Spraying Thinner 75-37
- Cure time @ 75°F -**
  - To touch - 2 hours
  - To handle - 8 hours
  - To recoat - 24 hours
- Pot Life @ 75°F -** 16 hours minimum
- Induction Time -** 30 minutes

- |                                      |               |                |
|--------------------------------------|---------------|----------------|
| <b>Consists of -</b>                 | 1 Gallon Unit | 10 Gallon Unit |
| <b>Base</b> (A) 513-10A              | 1 Gallon (SF) | 5 Gallon       |
| <b>Catalyst</b> (B) 77-13B or 77-17B | 1/2 Gallon    | 5 Gallon       |
| <b>Unit Shipping Weight</b>          | 11 lbs.       | 101 lbs.       |

(SF) - short filled

**Shelf Life -** 12 months minimum from date of manufacture when maintained in protected storage @ 40-100°F (subject to reinspection thereafter).

## APPLICATION INSTRUCTIONS

Consult your Mobile Paint Representative for the protective coating system best suited for your requirements.

**Limitations:** Apply in good weather when air and surface temperature are above 50°F and surface temperature is at least 5°F above the dew point. For optimum application properties, material should be between 70° to 100°F prior to mixing and application. Maintain unmixed material in closed containers in protected storage at 40 - 100°F.

**Surface Preparation** - Good surface preparation is essential to a satisfactory coating system. Surfaces to be coated should be clean and dry. Remove all oil, grease, mildew or other contamination by solvent or detergent cleaning or other effective means.

**New or Unfinished Surfaces - Ferrous Metal:** For best performance, application to abrasive blasted surface is recommended. "Commercial Blast Cleaning" (SSPC-SP6) is recommended as minimum. Proper blast media and blasting equipment shall be used to produce an average profile depth of 1.5 mils minimum. Do not reuse abrasive media. Remove blasting dust and grit from surfaces before painting. Blasted surfaces should be coated within 8 hours after blasting or before rusting or other contamination of the surface occurs. If blasting is not feasible, remove rust by "Hand or Power Tool Cleaning" (SSPC-SP2 or -SP3). **Galvanized Metal:** Remove oil and prime with Vinyl Wash Primer 9-48. **Aluminum:** Clean thoroughly and etch with phosphoric acid based cleaning solution. Rinse well and allow to dry.

**Previously Finished Surfaces:** Repair all damaged areas. Remove gloss from previous paint by sanding or "Brush Blasting" (SSPC-SP7). Remove rust, corrosion products, heavy chalk and loose or peeling paint by "Hand or Power Tool Cleaning" (SSPC-SP2 or -SP3). Spot prime any bare areas as in new work above. If doubt exists concerning compatibility of this coating with the previous system, apply coating to a representative area (25 square feet minimum) and allow to cure and age several weeks. Then inspect for adhesion failure, wrinkling, lifting, blistering or any other sign of incompatibility. If there are no signs, coating work can proceed. If lifting occurs, a barrier coat such as Mo-Bar™ Universal Primer 28-DR-105 or 28-DH-37 should be applied prior to coating with MoPoxY™.

**Mixing:** This is a two component coating supplied in two containers as a unit. Always mix a complete unit in the proportions supplied. (1) Mix the contents of 513-10A Base (Component A) thoroughly with a power agitator. (2) Combine the entire contents of Component A and Component B (Curing Agent 77-13B) and mix thoroughly

with a power agitator. Allow a 30 minute induction time before using the coating. Agitate before use. Occasional stirring during use is suggested.

**Thinning:** This product is supplied at normal brushing viscosity. If thinning is necessary, thin up to 1/2 pint per gallon with MoPoxY™ Brushing Thinner 75-35 for brush or roller. Thin up to 1/2 pint per gallon with MoPoxY™ Spraying Thinner 75-37 for spray.

**Application:** Apply by brush, roller or conventional or airless spray. Roller application may require special care to prevent bubbling and more than one coat to obtain proper film thickness. Apply at 5.0 mils wet film thickness which will yield 2.0 mils dry film thickness.

**Equipment:** Brush - Use a good quality bristle brush. Roller - All purpose, good quality roller with 3/8" nap maximum. Conventional spray - For suction feed, use DeVilbiss MBC gun with E tip and needle and 30 air cap or equivalent at 40-45 psi atomizing pressure. For pressure feed, use DeVilbiss MBC gun with E tip and needle and 704 air cap or equivalent at 40-45 psi atomizing pressure and 5-8 psi fluid pressure, 3/8" ID material hose, double regulated pressure tank with oil and moisture separator. Airless Spray - Minimum of 28:1 ratio pump, .013" - .015" tip, 1/4" ID Teflon material hose.

**Note:** During lunch, breaks or any period of work stoppage, material should be removed from hoses and equipment. Release pressure from equipment and flush hoses and equipment with 75-35, 75-37 or ketone solvents. Do not repressurize equipment until ready to resume work.

**Cleanup:** Clean all equipment immediately after use with MoPoxY™ Brushing Thinner 75-35 or MEK. Completely flush all spray equipment with either of these solvents. Occasional flushing of spray equipment during the course of the working day helps prevent buildup and possible clogging.

**Safety:** Safe storage, handling and use dictate that adequate health and safety precautions be observed with this product and any recommended thinners. User is specifically directed to consult the current Material Safety Data Sheet for this product as well as precautions contained on product labeling.
